Measured, not claimed: 246 live turns, 96.8% of figures traced to an engine.

Gemini 3.5 Flash-Lite on Google Cloud, 18 October. Synthetic seeded worlds, not production data. The limits are on the slide.

ANSWER QUALITY

246 live turns on Gemini

200 / 213
verdicts passed

96.8%
of figures traced to an engine result

40 / 42
on the held-out set, run once

SPEED

Same live run, and the deployed app

2.7 s
median turn, 4.6 s at p95, 0 timeouts

< 1 ms
what-if shock, against a 200 ms budget

1.7 s
page load (LCP) on Cloud Run, CLS 0.006

ENGINES VS PLANTED TRUTH

Synthetic worlds with a known answer

0.74×
forecast error vs a naive guess; 90% interval held 87%

1.5%
largest error in the causal fit

1.00 / 0.99
precision and recall, ring lens

SAFETY AND INTEGRITY

Checks the system enforces

15 / 15
red-team probes passed (a small set)

11 / 11
planted data breaches quarantined, 0 healthy events refused

2,807 / 2,807
rows restored in the recovery drill

KNOWN LIMITS

Published, not hidden

13
of 213 verdicts failed; the reasons are published

20–33%
of eval turns ran on fixture data, not the engines

Not measured
cost per turn and time saved per case

No load test
Cloud Run under concurrent users is untested

Sources: live and held-out runs in evals/reports, engine, operations and geo docs, Cloud Run web-vitals report (one page, one machine). Counts are verdicts, not turns.
